Part II. Self-Assessment

The Town of Mansfield has completed the required self-assessment, and has determined that our Municipality is in substantial compliance with all permit requirements.

Mansfield drainage system has been installed and continuously upgrade throughout the years and can be reproduced as needed. The requirement of BMP's for erosion and sediment control on all projects continued during the 14th year.

The Mansfield D.P.W. continues to use CaCl₂ (a natural salt brine that is exothermic and hygroscopic) which has reduced the accumulation of sand within its catch basins. The CaCl₂ has the ability to release heat in a chemical reaction and attract moisture creating an effective anti-freeze that helps speed up the de-icing process).

During this 14th year, we continued to utilize are our contacts with volunteer advisory groups to enlist their input and support for storm water improvement projects. Continued funding and improvements to the Towns drainage system will be required for the development of the next 5-year plan and hopes to continue with improvement of its storm water management program.

Develop Engineering Services for Stormwater Assistance with Tighe&Bond– MS4 Compliance Assessment.
