West Springfield: NPDES Compliance for goals 2F, 3A, and 3B

The Town of West Springfield has mapped the entire stormwater system and inspected 272 outfalls for the presence of non-storm water discharges. The town has also mapped the remaining stormwater systems and produced a complete GIS map. Information gathered from outfall testing will allow the town to detect, locate, and eliminate illicit discharges from the storm water system. The system-wide stormwater maps will help provide the town the ability to trace pipe connections upstream of the outfall being investigated to help determine the source of pollutants. The town does not have a finalized Illicit Discharge Plan, as we anticipate that there may be some revisions once comprehensive inspections of outfalls is completed.

In addition to mapping, the town has started a program to clean and inspect all of the storm drain pipes. During 2014, Kenyon Pipeline Inspection cleaned and performed video inspections of approximately 16,000 linear feet of storm drain, including pipes, catch basins and manholes. The following streets were included:

Rogers Ave	Elm St	Summit St
Park St	Roanone Ave	Ashley St
Park Ave	Windsor St	Upper Church St
Piper Rd	Bosworth St	Van Deene Ave
Union St	North Boulevard	Central St
South Boulevard	Heywood Ave	

This program will enable the Town to find illicit connections and sources of pollution. Priority will be given to streets that are candidates for paving or reconstruction.

The town has invested and continues to invest a substantial amount of financial resources, effort, and time to map and inspect the entire storm water system in addition to outfalls. This will provide significant value-added benefits for the Illicit Discharge Detection and Elimination program.
